SKILLS

- Control systems & feedback
- Signal processing
- Electronics & circuits
- Energy conversion
- Systems modelling
- Optimisation & algorithms
- Applied mathematics

COMPUTING

- Python
- C / C++
- OCaml
- SQL

SOFT SKILLS

- Analytical thinking
- Creative thinking
- Resilience under pressure
- Teamwork
- Adaptability

LANGUAGES

- French: native
- English: B2 (professional and technical)
- Swedish: elementary/intermediate

INTERESTS

- Video & photography (clubs)
- Robot design (school club)
- Climbing, badminton
- Bivouac, hiking

Joel DELAROQUE

Engineering Student in 3EA (Electrical, Electronics, Automation)

PROFILE & UNIQUE VALUE PROPOSITION

3EA engineering student at INP-ENSEEIHT, coming from a scientific preparatory class (CPGE MPI). I combine a strong scientific and computing background with a visual and creative sensibility, to bring a design and innovation dimension to electrical, energy and automation systems engineering projects.

Objective: engineering internship in electrical, energy or automation systems.

EDUCATION

Engineering Degree (Master's level) *2026 – 2029 (ongoing)*
INP-ENSEEIHT, Toulouse

- 3EA track: electrical, energy, electronic and automation systems.
- Key modules: fundamental electronics, circuit theory, control systems & feedback, signal processing, energy conversion, applied computer science.

CPGE MPI (Mathematics, Physics, Computer Science) *2024 – 2026*
Lycée Thiers, Marseille

- Intensive two-year programme building analytical rigour, advanced engineering methods and the ability to work in a demanding environment.

French Baccalauréat (general track), highest honours *2024*
Saint Joseph de la Madeleine, Marseille

EXPERIENCE & PROJECTS

Defence & Drones Hackathon *2026 (1 day)*
French Ministry of the Armed Forces

- Military-supervised hackathon: solve, in one day, a challenge on the optimal positioning of surveillance drones for tactical missions.
- Designed and programmed, as a team, the position-calculation application using spatial optimisation and algorithms.
- Strengthened my ability to deliver under tight time constraints and to collaborate with multidisciplinary profiles.

Teaching & creative assistant internship *2023 (2 weeks)*
École des Beaux-Arts de Marseille

- Immersion in the teaching team of a higher-education art school.
- Helped organise hands-on workshops; supported students with visual and technical production tools.
- Developed active listening and creative mediation; confirmed my goal of combining engineering and artistic creation.

Industrial discovery internship *2022 (1 week)*
La Serrurerie de la Parette, Marseille

- Followed a technical specification in a boilermaking/metalwork workshop; observed cutting, machining and assembly processes.
- Gained awareness of manufacturing constraints and of strict safety standards.
